TRIMESTER 2, 2015/2016

# **BFS1024 – STATISTICS FOR FINANCE**

(All sections / Groups)

8 MARCH 2016 2.30 p.m. - 4.30 p.m. ( 2 Hours )

### INSTRUCTIONS TO STUDENTS

- 1. This question paper consists of THREE (3) printed pages exclusive of the cover page, formulae sheet and statistical tables.
- 2. Answer ALL four questions in the answer booklet provided.
- 3. Students are allowed to use non-programmable scientific calculators only.
- 4. Marks are shown at the end of each question.

### Question 1 [27 marks]

- (a) An industrial plant is conducting a study to determine how quickly injured workers are back on the job following injury. Records show that 10% of all injured workers are admitted to the hospital for treatment and 15% are back on the job the next day. In addition, studies show that 2% are admitted for hospital treatment and back on the job the next day.
  - i) If a worker is injured, what is the probability that the worker will either be admitted to a hospital or be back on the job the next day or both? [3 marks]
  - ii) What is the probability that an admitted worker not to be back on job the next day? [6 marks]
- (b) Amber operates a pastry shop selling two of their signature cake, the strawberry and chocolate cakes. Let *X* denotes the number of strawberry cakes sold daily and *Y* denotes the number of chocolate cakes sold daily. The distribution of the data is provided as follows.

X	15	18	20
P(x)	0.50	0.30	0.20
<i>y</i>	18	22	32
P(y)	0.60	0.30	0.10

i) Find the expected number and variance of strawberry cakes sold daily.

[6 marks]

ii) Find the expected number and variance of chocolate cakes sold daily.

[6 marks]

iii) Find the mean and variance of total cakes sold daily assuming sales of both cakes are not correlated. [6 marks]

#### Question 2 [25 marks]

- (a) A local drugstore owner knows that, on average, 50 people enter his store each hour.
  - i) Find the probability that in a given 3-minute period, two people enter the store.

[4 marks]

ii) Find the probability that at most 2 people enters the store for the first 5 minutes after opening store. [8 marks]

Continued...

- (b) The finished inside diameter of a piston ring is normally distributed with a mean of 10 centimeters and a standard deviation of 0.3 millimeter.
  - i) What proportion of rings will have inside diameter exceeding 10.07 centimeters? [3 marks]
  - ii) What is the probability that a piston ring will have an inside diameter between 9.9 and 9.95 centimeters? [6 marks]
  - iii) Below what value of inside diameter will 15% of the piston rings fall?

[4 marks]

## Question 3 [19 marks]

A study of the effects of smoking on sleep patterns is conducted. The measure observed is the time, in minutes, that it takes to fall asleep. The following data are obtained as follows.

Smokers	Non- smokers
69.3	28.6
56.0	29.8
22.1	30.6
47.6	36.0
53.2	25.1
48.1	28.4
52.7	31.8
34.4	37.9
60.2	
43.8	

- (a) Determine the point estimate of population mean and standard deviation for both the smokers and non-smokers samples. [6 marks]
- (b) Can we conclude that the smokers having more difficulties in falling asleep at 5% significant level? [13 marks]

Continued...

## Question 4 [29 marks]

A study was done on a diesel-powered light-duty pickup truck to see if humidity, air temperature and barometric pressure influence emission of nitrous oxide (in ppm). Emission measurements were taken at different times, with varying experimental conditions and partial output was provided.

ANOVA	df	SS	MS
Regression		3605.7736	
Error			
Total	49	4820	

Variable	Coefficients	p-value
Intercept	- 3.508	
Humidity	- 0.003	0.005
Temperature	0.001	0.011
Pressure	0.154	0.053

(a) Determine the regression equation.

[3 marks]

(b) Interpret the impact of humidity on the emission of nitrous oxide.

[3 marks]

(c) Test whether the model is significant.

[15 marks]

(d) Determine which of the predictors to have significant impact on the emission of nitrous oxide at 5% significant level. [8 marks]

End of Page

#### A. DESCRIPTIVE STATISTICS

$$Mean = \frac{\sum X_i}{n}$$

Standard Deviation (s) = 
$$\sqrt{\frac{\sum X^2}{n-1} - \frac{(\sum X)^2}{n(n-1)}}$$

Pearson's Coefficient of Skewness 
$$(S_k) = \frac{3(\overline{X} - M \text{ edian})}{s}$$
 or  $\frac{\overline{X} - M \text{ ode}}{s}$ 

#### B. PROBABILITY

P(A or B) = P(A) + P(B) - P(A and B)

P(A and B) = P(A) P(B) if A and B are independent

 $P(A \mid B) = P(A \text{ and } B) / P(B)$ 

### Poisson Probability Distribution

If X follows a Poisson Distribution P ( $\lambda$ ) where  $P(X = x) = \frac{e^{-\lambda} \lambda^x}{x!}$ 

then the mean =  $E(X) = \lambda$  and variance =  $VAR(X) = \lambda$ 

#### **Binomial Probability Distribution**

If X follows a Binomial Distribution B(n, p) where  $P(X = x) = {}^{n}C_{x}p^{x}q^{n-x}$ 

then the mean = E(X) = n p and variance = VAR(X) = npq where q = 1 - p

#### **Normal Distribution**

If X follows a Normal distribution N( $\mu$ ,  $\sigma$ ) where E(X) =  $\mu$  and VAR(X) =  $\sigma^2$ 

then 
$$z = \frac{X - \mu}{\sigma}$$

#### C. EXPECTATION AND VARIANCE OPERATORS

 $E(X) = \sum [X \cdot P(X)]$ 

$$VAR(X) = E(X^{2}) - [E(X)]^{2}$$

If E (X) = 
$$\mu$$
 then E ( $k$ X) =  $k$   $\mu$ , E(X + Y) = E(X) + E(Y)

If VAR (X) = 
$$\sigma^2$$
 then VAR  $(kX) = k^2 \sigma^2$ ,

$$VAR (aX + bY) = a^{2}VAR(X) + b^{2}VAR(Y) + 2ab COV(X, Y)$$

where 
$$COV(X, Y) = E(XY) - [E(X)E(Y)]$$

# D. CONFIDENCE INTERVAL ESTIMATION AND SAMPLE SIZE DETERMINATION

(100 -  $\alpha$ ) % Confidence Interval for Population Mean ( $\sigma$  Known) =  $\overline{X} \pm Z_{\alpha/2} \left( \frac{\sigma}{\sqrt{n}} \right)$ 

(100 - α)% Confidence Interval for Population Mean (σ Unknown) =  $\overline{X} \pm t_{\alpha/2,n-1} \left( \frac{s}{\sqrt{n}} \right)$ 

(100 -  $\alpha$ )% Confidence Interval for Population Proportion =  $p \pm Z_{\alpha/2} \sqrt{\frac{p(1-p)}{n}}$ 

Sample Size Determination for Population Mean  $= n \ge \frac{(Z_{\alpha/2})^2 \sigma^2}{E^2}$ 

Sample Size Determination for Population Proportion =  $n \ge \frac{(Z_{\alpha/2})^2 p(1-p)}{E^2}$ 

Where E = Limit of Error in Estimation

#### E. HYPOTHESIS TESTING

Standard Deviation (o) Known	Standard Deviation (σ) Not Known
$Z = \frac{\overline{x} - \mu}{\sigma / \sqrt{n}}$	$t = \frac{\overline{x} - \mu}{\sqrt[S]{\sqrt{n}}}$
ne Sample Proportion Test	
One Sample Proportion Test $Z = \frac{p - \pi}{\sqrt{\frac{\pi(1 - \pi)}{n}}}$	

Two Sample Mean Test

Standard Deviation (o) Known

$$z = \frac{(x_1 - x_2)}{\sqrt{\sigma_1^2 / n_1 + \sigma_2^2 / n_2}}$$

Standard Deviation (v) Not Known

$$t = \frac{\overline{(x_1 - x_2)}}{\sqrt{S_p^2 \left(\frac{1}{n_1} + \frac{1}{n_2}\right)}}$$
where  $S_p^2 = \frac{(n_1 - 1)S_1^2 + (n_2 - 1)S_2^2}{(n_1 - 1) + (n_2 - 1)}$ 

Two Sample Proportion Test

$$z = \frac{(p_1 - p_2)}{\sqrt{p(1-p)\left[\frac{1}{n_1} + \frac{1}{n_2}\right]}} \text{ where } p = \frac{(n_1p_1) + (n_2p_2)}{n_1 + n_2} = \frac{X_1 + X_2}{n_1 + n_2}$$

where X<sub>1</sub> and X<sub>2</sub> are the number of successes from each population

#### F. REGRESSION ANALYSIS

#### SIMPLE LINEAR REGRESSION:

**Correlation Coefficient** 

$$r = \frac{\sum XY - \left[\frac{\sum X \sum Y}{n}\right]}{\sqrt{\left[\sum X^2 - \left(\left(\sum X\right)^2 / n\right)\right]\left[\sum Y^2 - \left(\left(\sum Y\right)^2 / n\right)\right]}} = \frac{COV(X, Y)}{\sigma_X \sigma_Y}$$

Regression Coefficient

$$b_{1} = \frac{\sum XY - \left[\frac{\sum X \sum Y}{n}\right]}{\left[\sum X^{2} - \left(\left(\sum X\right)^{2}/n\right)\right]}, \qquad b_{0} = \overline{Y} - b_{1}\overline{X}$$

# MULTIPLE LINEAR REGRESSION:

Adjusted r-square = $1 - \left[ \frac{(1-r^2)(n-1)}{(n-p-1)} \right]$	where $p =$ number of independent variables
---	---

Source	Degrees of Freedom	Sum of Squares	Mean Squares
Regression	p	SSR	MSR = SSR/p
Error	n-p-1	SSE	MSE = SSE/(n-p-I)
Total	n – 1	SST	

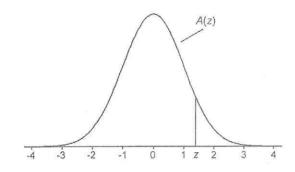

Test Statistic for Significance of the Overall Regression Model = F = MSR/MSE

Test Statistic for Significance of each Explanatory Variable =  $t^* = b_i / S_{bi}$  and the

Critical  $t = t_{(n-p-1), \alpha/2}$ 

Table A.1

Cumulative Standardized Normal Distribution

A(z) is the integral of the standardized normal distribution from  $-\infty$  to z (in other words, the area under the curve to the left of z). It gives the probability of a normal random variable not being more than z standard deviations above its mean. Values of z of particular importance:

Z	A(z)	
1.645	0.9500	Lower limit of right 5% tail
1.960	0.9750	Lower limit of right 2.5% tail
2.326	0.9900	Lower limit of right 1% tail
2.576	0.9950	Lower limit of right 0.5% tail
3.090	0.9990	Lower limit of right 0.1% tail
3.291	0.9995	Lower limit of right 0.05% tail

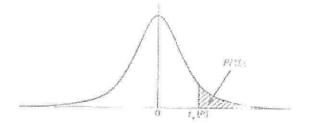

Z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09

# TABLE 10. PERCENTAGE POINTS OF THE t-DISTRIBUTION

This table gives percentage points  $t_{\nu}(P)$  defined by the equation

$$\frac{P}{\mathrm{Ioo}} = \frac{\mathrm{I}}{\sqrt{\nu\pi}} \frac{\Gamma(\frac{1}{8}\nu + \frac{1}{2})}{\Gamma(\frac{1}{8}\nu)} \int_{t_{p}(P)}^{\infty} \frac{dt}{(\mathrm{I} + t^{\mathrm{I}}/\nu)^{\frac{1}{8}(\nu+1)}}.$$

Let  $X_1$  and  $X_2$  be independent random variables having a normal distribution with zero mean and unit variance and a  $\chi^8$ -distribution with  $\nu$  degrees of freedom respectively; then  $t=X_1/\sqrt{X_2/\nu}$  has Student's t-distribution with  $\nu$  degrees of freedom, and the probability that  $t \geq t_{\nu}(P)$  is P/100. The lower percentage points are given by symmetry as  $-t_{\nu}(P)$ , and the probability that  $|t| \geq t_{\nu}(P)$  is 2P/100.

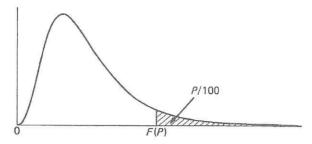

The limiting distribution of t as  $\nu$  tends to infinity is the normal distribution with zero mean and unit variance. When  $\nu$  is large interpolation in  $\nu$  should be harmonic.

# TABLE 12(b). 5 PER CENT POINTS OF THE F-DISTRIBUTION

If  $F=\frac{X_1}{\nu_1}\Big/\frac{X_2}{\nu_2}$ , where  $X_1$  and  $X_2$  are independent random variables distributed as  $\chi^2$  with  $\nu_1$  and  $\nu_2$  degrees of freedom respectively, then the probabilities that  $F\geqslant F(P)$  and that  $F\leqslant F'(P)$  are both equal to P/100. Linear interpolation in  $\nu_1$  and  $\nu_2$  will generally be sufficiently accurate except when either  $\nu_1>$  12 or  $\nu_2>$  40, when harmonic interpolation should be used.

(This shape applies only when  $\nu_1 \geqslant 3$ . When  $\nu_1 < 3$  the mode is at the origin.)
